

## Add to Home Screen

You can add an icon to the home screen of your smart phone so you can launch the mobile site just like an app.

### iPhone or iPod touch

- browse to the front page of the mobile site
- in the Safari menu at the bottom of your screen, click on either the plus sign or box with arrow (depending on your version)
- this should bring up a menu where one of the choices is "Add to Home Screen"
- you now have an icon on your home screen that you can click any time you want to visit the site

### Android

- open the mobile site in Android's web browser
- use the menu to add a bookmark for the site
- Now view the bookmark in the bookmarks area - long press (hold down) the icon for the new bookmark
- you will now have a menu with the option "Add Shortcut to Home"
- you now have an icon on your home screen that you can click any time you want to visit the site
